

i10

Receiving Card

Specification v2.0.0

Overview

i10 is a small pixel pitch and high-end receiving card developed by Colorlight.

i10 single card can load up to 1024×384 pixels and support up to 32 groups of parallel data or 64 groups of serial data, which can be expanded to 128 groups of serial data.

i10 adopts DDR2 SODIMM interface, and can conveniently integrate with the HUB or display module, making the design of display module structure more flexible and convenient.

i10 has not only the functions of mainstream receiver cards, but also a series of practical and strong functions developed for high-end displays, increasing the additional value of the card. i10 can be used in high-end rental displays and LED screens with small pixel pitch.

Features

Display effect

- Support 8bit/10bit/12bit Video source input
- Support HDR-HDR10, HDR-HLG
- Support 10/12bit full gamma independent adjustment
- Support Infi-bit grayscale compensation technology
- Support low latency
- Support color temperature adjustment
- Support grayscale refinement
- Support better gray at low brightness

Correction processing

- Support low-grayscale calibration
- Support multi-layer calibration
- Support 14bit pixel-to-pixel calibration in brightness and chromaticity

Easy maintenance

- Support advanced softedge technology
- Support highlight and OSD
- Support color gamut adjustment
- Support screen rotation
- Support pre-stored pictures
- Support 16-way of intelligent module to save calibration coefficients and other

information on module

- Supports quick firmware upgrade and quick release of correction coefficients
- Support any pumping row, pumping column and pumping point
- Support monitoring of cabinet temperature, voltage and power

Stable and reliable

- Support loop redundancy
- Support receiver card redundancy
- Support ethernet cable status monitoring
- Support firmware program redundancy and readback
- Support dual power redundancy
- Support 7×24h uninterrupted work

Feature details

Display effect	
12bit	It supports the highest 12bit color depth video input and output, showing that the gray scale is 16 times the normal 8bit video source, making the display screen grayscale transition more uniform and more delicate.
HDR	With the support of HDR master control, HDR display of various HDR10 / HLG standards can be realized, presenting images with high dynamic range, high contrast and wide color gamut.
Frame rate	Adaptive frame rate technology, not only supports 23.98/24/29.97/30/50/59.94/60Hz regular and non-integer frame rates, but also outputs and displays 120/144/240Hz high frame rate pictures, which greatly improves picture fluency and reduces drag film. (Note: it will affect the load).
Better gray at low brightness	By optimizing the gamma meter algorithm, the display screen can maintain the integrity and perfect display of gray scale when reducing the brightness, showing the display effect of low brightness and high gray scale.
14bit calibration	14bit high-precision brightness and chromaticity correction point by point, which can effectively eliminate the chromatic aberration of the lamp point, ensure the uniformity and consistency of the color brightness of the entire screen, and improve the overall display effect.
Multi-layer calibration	Support storage and processing of multiple correction coefficients under different brightness, real-time dynamic adjustment of the correction coefficients according to the actual playback content, and improve the uniformity and consistency of the screen under different gray levels.

Infi-bit	The use of dynamic compensation grayscale technology can significantly increase the grayscale of the LED display, effectively improving the details of the low-gray picture, making the grayscale transition smoother and the display effect more perfect.
Low-grayscale calibration	Solve the problem of low grayscale color blocks in the small-pitch cabinet based on the existing brightness correction. Additive compensation for the low grayscale is independent of the brightness and chromaticity correction.
Grayscale refinement	With the use of a luminance meter and LEDVISION software, the actual screen display conditions are measured, and the screen grayscale can be accurately corrected, which perfectly solves the gray jump and low gray color cast caused by the hardware.
Shortcut operation	
Cabinet highlight	Using the control software, you can quickly mark the selected target cabinet, display a flashing box on the front of the cabinet, and change the flashing frequency of the cabinet indicator at the same time, which is convenient for front and rear maintenance.
Quick OSD	Using the control software, you can quickly mark the actual hardware connection serial number of the receiving card corresponding to the Ethernet port, which is convenient for setting the connection relationship of the screen.
Advanced softedge	Using the control software, it can quickly and efficiently realize the seam processing, eliminate the visual bright and dark lines caused by hardware splicing, and support one-key reset, which can be used repeatedly in rental scenes.
Color adjustment	Using the control software, you can quickly and easily realize the color gamut adjustment and transformation of a single cabinet or screen, support custom adjustment and one-key restoration, and cooperate with the photometer to achieve high-precision color restoration, which can meet the needs of different scenes.
Image rotation	Support the single cabinet image to be rotated at 90°/180°/270° angles, and with part of the main control, the single cabinet image can be rotated and displayed at any angle.
Pre-stored pictures	Supports customizing the screen of the display when the power is turned on, the network cable is disconnected, and there is no video source signal.
Hardware monitoring	
Bit error detection	It supports the detection of data transmission quality and error code between receiving cards, and can easily and quickly identify the cabinet with abnormal hardware connection, which is convenient for maintenance.
Humidity monitoring	It supports cabinet humidity monitoring (requires cabinet design), can be sent back to the upper computer in real time, can be viewed on the software, and supports custom humidity abnormality reminders.
Temperature monitoring	It supports cabinet temperature monitoring (requires cabinet design), can be sent back to the upper computer in real time, can be viewed on the software, and supports custom setting of high temperature reminder. Monitoring receiving card's own temperature, no need for peripherals, 1 port for each card.
Power supply monitoring	It supports the monitoring of 4-way power supply of the cabinet (requires cabinet design), which can be sent back to the upper computer in real time, can be viewed on the software, and supports the reminder of abnormal power status.

Voltage monitoring	It supports the monitoring of the power supply voltage of the box (requires cabinet design), which can be sent back to the host computer in real time. It can monitor the voltage status of 3 channels of external power supply at the same time and monitor the voltage of 1 channel of the receiving card itself. It supports software to check the voltage monitoring value.
Point-by-point monitoring	Supports point-by-point monitoring of the cabinet (requires cabinet design), can be sent back to the host computer in real time, can be viewed on the software, and supports the reminder of too many dead pixels on the lamp board.
Smoke control	Support box smoke control (requires M3 combined with box design), can be sent back to the host computer in real time, can be viewed on the software, and supports custom smoke exception reminders.
Fan control	Support cabinet fan control (requires cabinet design), the fan switch can be set through the control software, and the fan start or speed control can be automatically controlled with temperature monitoring.
LCD monitoring	Support control box LCD liquid crystal screen display, support temperature, voltage and running time and other status information display, support no-signal button self-test test.
Redundancy	
Loop redundancy	The redundant Ethernet port is used to increase the connection with the transmitting equipment and increase the reliability of cascading between equipment. When one circuit fails, it can realize seamless switching to the other circuit and ensure the normal display of the screen.
Receiver card redundancy	Support to use two receiving cards to connect to the HUB board to control a single box at the same time. When the main receiving card is abnormal, the backup receiving card will work immediately to ensure the normal display of the screen.
Firmware redundancy	It supports firmware program backup and can be upgraded safely. There is no need to worry about the loss of firmware program due to cable disconnection or power interruption during the upgrade process.

Basic parameters

Control System Parameters	
Control Area	Maximum 1024×384 pixels, there will be differences in downloading and downloading of different applications and please refer to the actual*
Ethernet Port Exchange	Supported, arbitrary use
Gray Level	Maximum 65536 levels
Display Module Compatibility	
Chip Support	PWM chips
Scan Type	Support up to 1/128 scan
Module Specifications Supported	Support module of any row and column within 16384 pixels
Cable Direction	Support route from left to right, from right to left, from top to bottom, from bottom to top
Data Group	32 groups of parallel RGB full color data and 64 groups of serial RGB data, which can be expanded to 128 groups of serial data, data groups can be exchanged freely
Data Folded	Support horizontal 2~8 fold or vertical 2~4 fold
Module pumping point, row and column	Support any pumping point and any pumping row and any pumping column
Monitoring Function (In conjunction with the monitoring module)	
Temperature Monitoring	Temperature of receiver cards: between -25°C~75°C, 1 port for each card. Monitoring receiving card's own temperature, no need for peripherals, 1 port for each card.
Humidity Monitoring	Humidity of receiver cards: between 25%~95%RH, 1 port for each card
Power Supply Monitoring	Monitor the working status of the power supply, 4 ports for each card
Power Voltage Monitoring	Monitoring receiving card's own voltage, no need for peripherals, 1 port for each card. Monitoring the working voltage of the power supply, 3 ports for each card
Bit Error Monitoring	Monitor the total number of data packets and error packets to check network quality
Cabinet monitoring	With M3, it can support monitoring functions such as cabinet door, fan, smoke, etc.
Pixel-to-Pixel Calibration	
Brightness Calibration	Support, the correction accuracy can reach 14bit
Chromaticity Calibration	Support, the correction accuracy can reach 14bit
Other features	
Redundancy	Support loop redundancy, receiver card redundancy and PSU redundancy

	and firmware redundancy
Optional functions	box LCD liquid crystal display, temperature control relay, module hot swap, shaped screen etc.

Hardware

Appearance

Interface

S/N	Name	Function	
1	Power indicator	Red indicator always on: the power supply is normal	
2	Signal indicator	Flashes once per second	Receiving card: normal working, Ethernet cable connection: normal
		Flashes 10 times per second	Receiving card: normal working, Cabinet: Highlight
		Flashes 4 times per second	Receiving card: Redundant port is working (In loop redundancy)
3	Fixed hole	Used to reinforce the receiving card to improve vibration resistance	
4	Gold finger interface	Connects with display’ s HUB or module. From the diagram above, the left side of the guide plate is first pin (Viewing from the front of card)	

Note:

- The product photos in this article are for reference only, and only the actual purchase shall prevail.
- For the DDR2 SODIMM socket used by i10, please refer to the connector specification for detailed specifications. Recommended 2.7mm fixed PCB solder spiral.

Equipment Specifications

Physical Specifications	
Hardware interface	DDR2 SODIMM socket
Ethernet port transmission rate	1Gb/s
Communication Distance	Recommended: CAT5e cable≤100m
Compatible with Transmission Equipment	Gigabit switch, Gigabit fiber converter, Gigabit fiber switch
Size	67.6mm×35.5mm×4.5mm
Weight	14g (with heat sink)
Electrical specification	
Voltage	DC 3.8~5.5V, 0.7A
Rated power	3.5W
Body Static Resistance	2kV
Operating environment	
Temperature	-25°C~75°C (-13°F~167°F)
Humidity	0%RH-80%RH, no condensation
Storage and transport environment	
Temperature	-40°C~125°C (-40°F~257°F)
Humidity	0%RH-90%RH, no condensation
Package information	
Packaging rules	Standard blister box device, 6 cards per box, 600 cards per carton
Package size	550.0mm×398.0mm×180.0mm
Certification Information	
RoHS certification, EMC Class A certification, EMC needs to be matched with the cabinet design, if necessary, please contact the technical staff for assistance	

Dimensions

Unit: mm

Tolerance: $\pm 0.3\text{mm}$

Definition of Pins

32 groups of parallel data interfaces

Ground connection	GND	199	200	GND	Ground connection

Note: FE and LED_SCLK2 are signal multiplexing pins, which are used as row decoding signals in parallel data and as the second serial clock in serial data, which can realize 128 groups of serial data expansion. When using 128 groups of serial data expansion mode, DATA65~DATA128 correspond to the interface data of multiplexing DATA1~DATA64.
