

i8

Receiving Card

Specification

Overview

i8 is a high-end receiving card developed for fine-pitch LED screens featuring a large load capacity and up to 32 parallel data groups or 128 serial data groups. Due to its small form factor, i8 is best fit into concise cabinets. With DDR2 SODIMM interface, it can be effortlessly integrated into the HUBs and the display modules, allows for flexible screen design.

i8 not only has all the functions of mainstream receiving cards, but also a series of practical and powerful features helping high-end displays to maximize video performance with stunning clarity. i8 can be perfectly used in high-end rentals as well as fine-pitch fix-installed LED screens.

Features

Display effect

- 8bit/10bit video source input.
- HDR10 and HLG.
- Full gamma independent adjustment.
- Infi-bit grayscale compensation technology.
- Low latency.
- Color temperature adjustment.
- Grayscale refinement.
- Better gray at low brightness.

Correction processing

- High precise per-pixel calibration in brightness and chromaticity.

Easy maintenance

- Seam correction.
- Highlight and OSD.
- Color gamut adjustment.
- Screen rotation.
- Prestore picture.
- Firmware upgrade without power restart.
- 8-way, up to 16 intelligent modules.
- Quick firmware upgrade and calibration coefficients download.
- Cabinet temperature, humidity, voltage and power monitoring.

- Irregular module, 4 modules with different wiring.

Stable and reliable

- Loop redundancy.
- Dual receiving card hot backup.
- PSU redundancy.
- Configuration parameter redundancy.
- Calibration coefficient redundancy.
- Firmware redundancy and readback.
- Ethernet cable status monitoring.
- 7×24h uninterrupted work.

Feature details

Display effect	
10bit	Maximum 10bit color depth video input and output, it presents a grayscale 4 times the normal 8bit video source, which offers smoother screen grayscale transition.
HDR	With the support of HDR master control, HDR display of various HDR10 / HLG standards can be realized, presenting images with high dynamic range, high contrast and wide color gamut.
Frame rate	Supports not only conventional and non-integer frame rates such as 23.98/24/29.97/30/50/59.94/60Hz, but also outputs and displays 120/144/240Hz high frame rate images, greatly improving picture smoothness and reducing smearing. (This feature affects the load capacity).
Better gray at low brightness	By optimizing the gamma meter algorithm, the display screen can maintain the integrity and perfect display of gray scale when reducing the brightness, showing the display effect of low brightness and high gray scale.
14bit calibration	Supports the 14bit calibration coefficients, and real-time processing of the calibration coefficient according to the actual playback content to improve the uniformity and consistency of the screen body at different gray levels.
Infi-bit	The use of dynamic compensation grayscale technology can significantly increase the grayscale of the LED display, effectively improving the details of the low-gray picture, making the grayscale transition smoother and the display effect more perfect.
Shortcuts	
Cabinet highlight	Mark quickly a target cabinet, by displaying a flashing rectangle indicator on the cabinet screen, which greatly facilitates front and rear maintenance.
Quick OSD	Mark quickly the index of a receiving card corresponding to a specific Ethernet port, allow for setting up the connection relationship of the screen easily.

Seam correction	Quickly and efficiently eliminate the perceptible bright and dark lines caused by physical screen splicing. It can be used repeatedly in rental scenarios, thanks to its advanced one-click reset feature.
Color adjustment	Allow you to quickly and easily adjust the color gamut of individual cabinet or screen. Support customized adjustment and one-click restore. Achieve high-precision color reproduction in combination with the use of the photometer.
Image rotation	Support the single cabinet image to be rotated at 90°/180°/270° angles, and with part of the main control, the single cabinet image can be rotated and displayed at any angle.
Prestore picture	Offering customizable picture display on the LED screen when there is no video signal.
Irregular module	It supports 4 modules with different wiring, which is convenient for users to use modules heterogeneously. Restriction: 1 scan (including cascade) supports a maximum of 1024 pixels, and the scan lines in the same data group must be consistent. When using 1~2 types of routing tables, a single set of data sets supports a maximum of 1024 pixels per scan; when using 3~4 types of routing tables, a single set of data sets supports a maximum of 512 pixels per scan.
Hardware monitoring	
Bit error detection	Quickly identify the cabinet with abnormal connection, thanks to the feature of data transmission quality detection between receiving card and LED sender.
Temperature monitoring	Monitor the cabinet (need the support from the cabinet design), and send to the computer in real-time the running cabinet temperature. With the software, users can monitor current temperature and be alerted on any abnormal condition.
Humidity monitoring	Monitor the cabinet (need the support from the cabinet design), and send to the computer in real-time the running cabinet humidity. With the software, users can monitor current humidity and be alerted on any abnormal condition.
Power supply monitoring	It supports the monitoring of 4-way power supply of the cabinet (requires cabinet design), which can be sent back to the upper computer in real time, can be viewed on the software, and supports the reminder of abnormal power status.
Voltage monitoring	It supports the monitoring of the power supply voltage of the box (requires cabinet design), which can be sent back to the host computer in real time. It can monitor the voltage status of 3-way of external power supply at the same time and monitor the voltage of 1-way of the receiving card itself. It supports software to check the voltage monitoring value.
Pixel-by-pixel monitoring	Monitoring cabinet pixel health (need the support from the cabinet design), and send to the computer in real-time each pixel status. With the software, users can check current pixels status and be alerted on the amount of bad pixels above a predefined threshold.
LCD monitoring	Display on the cabinet LCD screen the temperature, voltage, running time and other status, support one-click self-test.
Redundancy	

Loop redundancy	The receiving card switches signal source to the other Ethernet port, when one receiving channel fail, maintaining the normal display of the LED screen.
Receiving card hot backup	Two receiving cards connect to the HUB board to control a single cabinet at the same time. When the main receiving card is abnormal, the backup card will take over the display immediately.
Firmware redundancy	Support firmware backup. Users can safely upgrade firmware without worrying about losing firmware due to cable disconnections or power failure during the upgrade process.
Configuration parameter redundancy	Provide two sets of configuration parameters in the receiving card, one of them serves as backup parameter.
Calibration coefficient redundancy	The calibration coefficient is stored both in the factory area and user area of the receiving card simultaneously. The coefficient in the user area is used by default, but users can restore the calibration coefficient from the factory area to the user area at any time.

Basic parameters

Control System Parameters	
Load Capacity	Maximum 512x384 pixels. ¹
Ethernet Port Exchange	Supported, arbitrary use
Grayscale	Up to 65536 grayscale.
Display Module Compatibility	
Chip Support	PWM chips
Scan Type	Up to 128 scan lines.
Module Dimension	Up to 1024 pixels per data group.
Cable Direction	Route from left to right, from right to left, from top to bottom, from bottom to top.
Data Group	32 groups of parallel RGB full color data and 128 groups of serial RGB data, data groups can be exchanged freely
Data Fold	Horizontal or vertical 2~12 folds.
Module pumping point, row and column	Any pumping point and any pumping row and any pumping column.
Monitoring Function (work with the module with corresponding sensor)	
Temperature Monitoring	Temperature of receiver cards: -25°C~75°C, no need for peripherals. 1 port for each card
Humidity Monitoring	Measuring range: 25%~95%RH. 1 port for each card.
Power Supply Monitoring	Monitor the working status of the power supply. 4 ports for each card.
Voltage Monitoring	Monitoring the voltage of the cabinet power supply, 3 monitoring ports available each card. Monitor receiving card's own voltage is built-in.
Net cable Monitoring	Operating total number of packets, error packets and network quality.
Pixel-by-Pixel Calibration	
Brightness Calibration	Up to 14bit calibration accuracy.
Chromaticity Calibration	Up to 14bit calibration accuracy.
Other features	
Redundancy	Loop redundancy, receiving card redundancy, PSU redundancy, firmware redundancy, configuration parameter redundancy and calibration coefficient redundancy.
Optional functions	Cabinet LCD display, module hot swap, irregular screen design etc.

¹ The load capacity may vary on some feature enabled.

Hardware

Appearance

Interface

S/N	Name	Function	
1	Signal indicator	Flashes once per second	Receiving card: normal. Ethernet cable connection: normal.
		Flashes 10 times per second	Receiving card: normal. Cabinet: Highlight.
		Flashes 4 times per second	Receiving card: working with back up channel (Loop redundancy status).
2	Power indicator	Red indicator always on: the power supply is normal.	
3	Gold finger interface	Used to connect with the HUB or unit board. From the diagram above, the left side of the guide plate is first pin (Viewing from the front of card).	

* i8 uses DDR2 SODIMM socket, please refer to the connector specification for details. The product photos in this article are for reference only.

Equipment Specifications

Physical specifications	
Hardware interface	DDR2 SODIMM socket
Ethernet port transmission rate	1Gb/s
Communication Distance	Recommended: CAT5e cable≤100m
Compatible with Transmission Equipment	Gigabit switch, Gigabit fiber converter, Gigabit fiber switch
Size	L×W×H / 67.6mm(2.7")×35.5mm(1.4")×4.5mm(0.2")
Weight	10g / 0.02lbs, with heat sink.
Electrical specification	
Voltage	DC 3.8~5.5V, 0.6A
Rated power	3.0W
Body Static Resistance	2KV
Operating environment	
Temperature	-25°C~75°C (-13°F~167°F)
Humidity	0%RH-80%RH, no condensation
Storage and transport environment	
Temperature	-40°C~125°C (-40°F~257°F)
Humidity	0%RH-90%RH, no condensation
Packing information	
Packaging rules	Standard blister box device, 6 cards per box, 600 cards per carton
Package size	L×W×H / 550.0mm (21.7")×398.0mm(15.7")×180.0mm(7.1")
Certification	
* RoHS certification, EMC Class A certification, EMC needs to work with the cabinet design, please contact technical support for assistance.	

Unit: mm

Tolerance: $\pm 0.3\text{mm}$

*Studs are not recommended for further fixing.

*If you need to use studs, please contact technical support.

Definition of Pins

32 groups of parallel data interfaces

Instructions	Definition	Pin No.		Definition	Instructions
